

RocketFC v2 avionics bay - tube drilling template (Apogee 3.0" / 74 mm body tube, OD 76.2 mm)

Print at 100 % (no "fit to page"), check the 50 mm bar, cut on the outline, wrap it around the tube printed side out, FORWARD edge toward the nose, left and right edges meeting.
8 small circles = 3.2 mm drill for M3 x 8 button-head screws into the heat-set inserts. Hatched boxes = openings to cut (USB, ARM plug, power switch).
Slide the bay in from the forward end with the power switch at 12 o'clock and line its screw holes up with the tube before drilling full size.

FORWARD (nose) end of the bay
